

AMH Software Promotion

UPGRADE YOUR AUTOMATED CAROUSEL CONTROL SYSTEM FOR ONLY £995

Do you operate your storage carousel using an old fashioned obsolete green screen system? If so this may be of interest to you! For a limited time AMH is offering an automated control system upgrade, fully installed for a reduced rate of £995 with a standard monitor arm or £1195 with integrated keyboard and mouse trays (as shown below).

Many older carousel software systems are now obsolete which results in high repair costs should they breakdown. The majority of these systems operate on the MS Dos operating system and has not been supported by Microsoft since 2000. AMH offers windows based software that can be integrated into your current IT network.

AMH upgrade includes:

- 17" TFT Flatscreen Monitor
- Windows XP
- Keyboard & Mouse
- Monitor Arm with Keyboard and Mouse Trays
- SmartPik_SP Software
- Installation, Testing and User Training

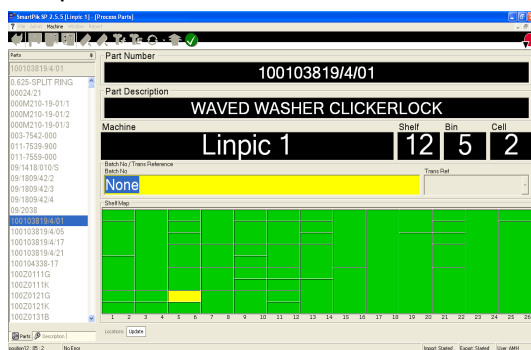

AMH is proud to offer SmartPik_SP as part of this upgrade promotion. With this software users have full control over every part in their carousel. SmartPik_SP can be integrated with both office and industrial carousels. Features include fastest route stock retrieval by part code or description, picking lists (fifo, lifo, select as you go, pre-select), secure logins, contents reports and an import/export facility.

Promotional prices are based on a part exchange for your old system.

* **£995 ex vat** with a standard monitor arm

* **£1195 ex vat** with integrated keyboard and mouse trays (as below)
